Dear Ryan

Re: Audiometry Programme

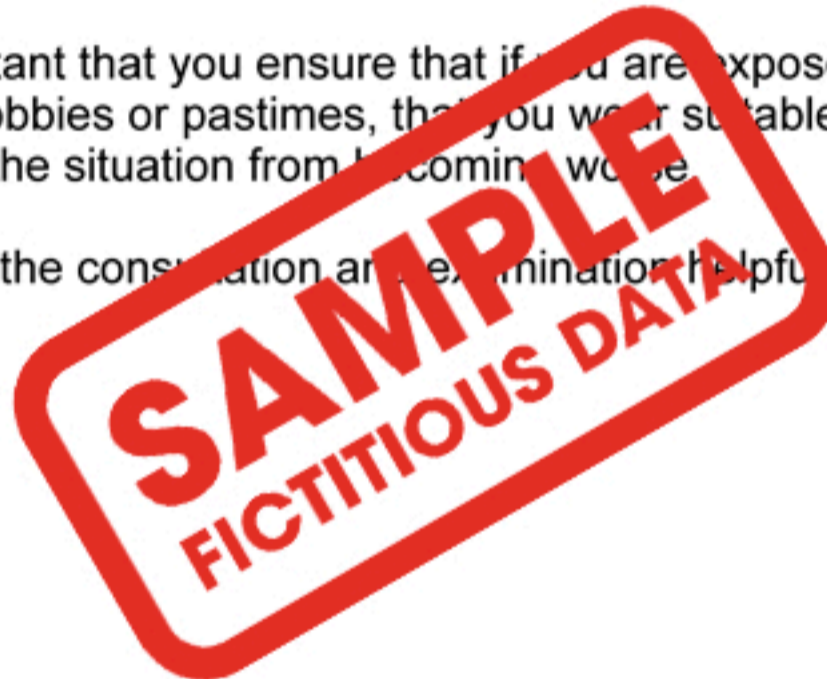

Your recent audiogram indicates that you may have 'poor hearing' which may be due to excessive exposure to noise either at work or in your hobbies or pastimes. This means that your hearing is worse than would be expected normally for someone of your age group.

Further investigation of the extent and possible causes of this damage is needed and so I am enclosing a letter to your GP and you should take it with you and see your doctor.

It is particularly important that you ensure that if you are exposed to excessive noise at work, or in hobbies or pastimes, that you wear suitable hearing protection to prevent the situation from becoming worse.

I hope that you found the consultation and examination helpful.

Yours sincerely,

Clb
